

Seth Quest

AI-Native Builder

seth@sethquest.com · 401-212-4382 · East Hampton, NY

Portfolio: [SethQuest.com](https://sethquest.com) · 60-second highlight reel and case studies on every project

SUMMARY

AI-native builder shipping product, design, and software solo, concept to launch, end to end. Two-plus years building with AI every day, on top of a twenty-year background across industrial design, innovation consulting, and startups in San Francisco.

TOOLS

AI Claude (Code, Projects, Artifacts, API), ChatGPT. 2.5+ years daily.

AI Media Omni (video), NanoBanana (image), Gigapixel (upscaling), ElevenLabs (voice).

Build React, Vercel, GitHub, Claude Code, API integrations.

Day-to-day Asana, Slack, Notion, Google Workspace.

EXPERIENCE

Founder & AI Consultant · **Be Brilliant** · 2024 – Present

Independent studio shipping AI-native product, design, brand, and software, for clients and as a founder.

Elua

2026

AI-native transformation for an early-stage fundraising platform serving nonprofits and ecosystem stewards. 3-month contract.

- Migrated the team from ad-hoc ChatGPT to a structured Claude workspace.
- Built the Elua Cortex, a knowledge base spanning all their documents so the team can query AI across everything they know.
- Built a weekly team check-in tool the whole company runs on.
- Designed the core of the product: distilled lengthy reports built from 20+ analyses into interactive, data-viz briefs a client actually reads.
- Built the report artifacts with three-layer citation drill-down, so every claim traces back to its source.
- Vibe-coded the React operations dashboard and Solan scoring interfaces into production with Claude Code.

Deep Fried Bananas

2026

AI consultancy for food & beverage, giving overwhelmed owners a clear roadmap instead of a pile of tools.

- Developed a framework around the 12 pillars of business and a process to leverage AI to optimize operations.
- Designed and shipped the scoring dashboard, roadmap engine, owner interface, and landing page end to end. In beta with first users.

Puma Mala

2026

A wellness, medical, and residential development in Costa Rica that nobody could picture. I made it legible and investable.

- Defined the vision with the developer, then built the brand and positioning that made the whole concept land in under a minute.
- Shipped a one-page concept site, AI-enhanced renderings, and a 60-second film for marketing and condo pre-sales.

LizzieTours

2024

A \$7M Hamptons listing arrived as a folder of silent photos. I turned it into a scroll-stopping cinematic tour.

- Built "Lizzie," an AI host, plus a cloned persona of the listing agent, to front the tour on camera with no camera.
- Chained photo upscaling, motion synthesis, voice cloning, and sound design into one repeatable production pipeline.

Do or Don't

2026

A stupid-simple habit tracker with no streaks and no shame, just a clear mirror of what you actually do.

- Designed the radial-wheel interface, color system, and brand, and produced the launch video. Solo, AI-native end to end.
- Built the business model: free app as on-ramp, email list as the asset, organic short-form video as acquisition.

AI Product Developer · **NSLS (Ignite)**

2024 – 2025

National Society of Leadership & Success. Brought AI into an organization that wasn't using it at all.

- Implemented AI software for rapid prototyping, UX design, and document summarization.
- Built an AI coach guiding college students toward landing their target jobs.

EDUCATION

BFA, Industrial Design · San Francisco State University
